

360° simalube service

simalube
service

 **SWISS MADE**

Your benefits with simalube service

- ✓ **Cost and time savings**
Relieve your team from all lubrication tasks. By outsourcing professionally, you save on personnel costs and use internal resources more efficiently.
- ✓ **Protection against costly downtime**
Avoid unplanned machine and production downtime. Continuous maintenance and preventive checks ensure smooth operation and significantly increase your overall equipment efficiency.
- ✓ **Optimised consumption and sustainability**
We ensure the ideal use of lubricants. Professional installation and semi-annual inspections reduce consumption and sustainably lower material costs.
- ✓ **Transparency and safety**
Rely on our expertise. We guarantee reliable lubrication and complete, transparent documentation of all processes.

Invest in the reliability of your equipment.

Maximum equipment availability. Zero lubrication effort.

Outsourcing that pays off: focus on your core business

In industry, lubrication is essential for operational safety but requires valuable skilled personnel and is time-consuming. Errors in dosing or missed maintenance intervals quickly lead to costly downtime.

The solution: 360° simalube service

As an experienced Swiss technology provider, we take full responsibility for lubricating your equipment. We are your comprehensive partner—from initial analysis to continuous maintenance. Benefit from maximum reliability and sustainably relieve your maintenance team..

3 Key Facts

Permanent optimal lubrication
**Prevention of unplanned
downtime**

Maximum operational reliability
**Predictable production,
increased occupational safety**

Efficient use of resources
**Reduction in maintenance
and material costs**

4 steps from analysis to sustainable maintenance

Phase I: Analyse und Set-up

Phase II: Continuous service and optimisation

Step 1

On-site analysis and consultation

We start with a personal visit to your facility. Our specialists record lubrication points with you and analyze technical and economic conditions.

- Assessment of the current lubrication situation
- Selection of the appropriate lubricator and accessories
- Cost-benefit analysis
- Creation of a tailor-made service offer

Step 2

Professional installation

We handle the complete installation of simalube lubricant dispensers. The setup is tailored to your equipment – for smooth operation from day one.

- Professional installation of lubricant dispensers on site
- Documentation of installed lubricators

Step 3

Initial inspection and fine adjustment

Quality assurance is key. About 4–6 weeks after commissioning, our team performs the first functional check. We inspect all dispensers and make adjustments if necessary.

- Inspection of all lubricators
- Corrections or adjustments as needed

Step 4

Regular maintenance and continuity

We guarantee ongoing support. Through semi-annual preventive inspections, we check functionality, proactively replace empty dispensers, and adapt installations to changing conditions. This ensures long-term maximum equipment availability.

- Semi-annual inspection of all lubricators
- Replacement of lubricators
- Long-term assurance of smooth operation and cost efficiency

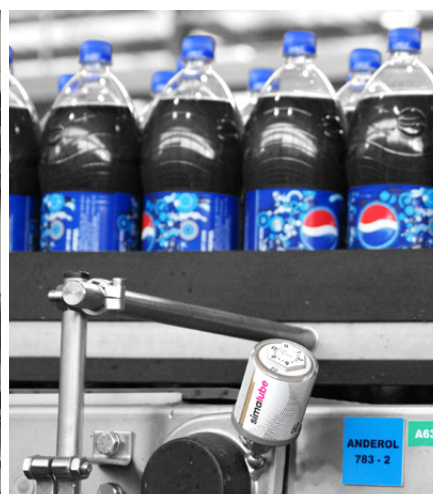

Invest in the reliability of your equipment

Optimise your operating costs and increase profitability.
360° simalube service is your key to smooth production processes.

Ready for lubrication that pays off?
